

TWIST LOCKS & BRIDGE FITTINGS

Twist Lock Stacking Pins

Twist Lock Stacking Pins are used to safely secure containers when stacked on top of each other.

Dovetail Deck Mount Twist Locks

These Deck Mount Twist Locks have a flat base which are generally used to weld directly onto steel decks on ships and secure the containers during transport.

Similarly, you can easily weld these lock mounts onto trailers or install them into various other surfaces like concrete to keep your container in place during transport or long term storage.

Bridge Fitting Clamps

Designed to safely connect empty or loaded shipping containers horizontally and are made to fit into container corner castings.

Each container requires four bridge fittings for safe horizontal flush connections.
